Human & Animal Ethics

The Research Ethics and Integrity office oversees and supports the operation of the University’s Animal Ethics Committees, Human Research Ethics Committees and the Faculty-based Low and Negligible Risk human ethics review panels. Additionally, the office provides training, support and advice to staff and students regarding the ethical requirements of research and teaching, application procedures and reporting requirements. The office is a resource for researchers who have questions regarding the ethical conduct of their research and their regulatory obligations.

Research Integrity

UQ offers training and resources to assist researchers in conducting their research with integrity, and in meeting their obligations under University policies, regulatory requirements and codes of practice. The Research Integrity unit also receives and manages concerns about the conduct of research. Research Integrity Advisors provide a first point of contact for people with questions related to the responsible conduct of research and are located in all UQ Faculties and Institutes.

International Safeguards

The Research Ethics and Integrity office has responsibility for managing UQ’s regulatory compliance obligations related to international safeguards. This includes preparing permit applications related to export controls and coordinating assessments of individuals and courses under Australia’s sanctions legislation. The office provides advice and training to researchers and staff and is the main point of contact with government on export control and sanctions related matters.
